

Workshop 2005
Leading the Way

Steelhead Recovery
in the Georgia Basin with a focus
on the Squamish Watershed.

Ministry of Water, Land and Air Protection has been actively involved in developing a Steelhead Recovery Program for the Squamish watershed and has been involved with numerous restoration projects, studies, enumerations, and genetic analysis of existing stocks over the years. During this presentation we hope to provide an overview on steelhead, their significance and their differences from rainbow trout. As well, we will be providing a power point presentation on some of the existing projects that are underway in the Squamish Watershed and discuss their implications to the overall Georgia Basin recovery plan.

Presenter – Greg Wilson
