

## Environmental Protection Advisory Bulletin

### **Tool and Equipment Rental Services**

*This advisory is to seek your assistance in the prevention of storm drain contamination.*

Tool and Equipment Rental Services clean, service and maintain various types of equipment. These businesses generally use a wide variety of fuels, oils, lubricants and other motor fluids in their everyday operation. The improper disposal of these fluids has resulted in pollutants being found at some Tool and Equipment Rental businesses.

Wastewater from pressure washing or equipment cleaning contain detergents, toxic chemicals, oils, greases, sediments and other contaminants harmful to aquatic life, which must not enter the storm drain system. Also, flammable liquids can create explosive conditions in our sewers and must not enter any drains, sewers, or other plumbing fixtures.

This is an important issue in Port Coquitlam as the storm drains (the roadside and parking lot drains) are separate from the sanitary sewer and discharge untreated into local creeks and streams. There are over 30 km's of open creeks and streams in Port Coquitlam, which form an important network of watercourses, which provide natural habitat for salmon, trout, and other aquatic life.

### **Best Management Practices**

To prevent contaminants from entering the storm drain system and ultimately our creeks and rivers please observe the following practices:

- Wastewater flows from washing tools and equipment must not enter the storm drain system.
- **Options to protect the storm drain system include:**
  - Establish a “wash pad” connected to the sanitary sewer system.
  - Direct wash water to an “isolated” sump or holding tank for collection and removal by a disposal company.
  - Where collection of wastewater from washing or mobile pressure washing activities is impractical, it may be possible to direct the wastewater away from storm drains to landscaped or gravel areas; however, you may be liable for any contamination or damage associated with this practice.
  - Contact the City of Port Coquitlam, Engineering Department for further information on sanitary sewer connections, or contact the Ministry of Water, Land and Air Protection for other disposal information.
- Interior drains must have an approved connection to the sanitary sewer system.
- Fueling of machinery must be done in areas where spills will be contained and not enter the storm drain system.
- Drip pans must be placed under any leaking tools, equipment or vehicles to capture fluids.
- Sweep parking lots and work areas rather than flushing dirt and debris into the storm drains with water.

## **Best Management Practices, continued**

- Some waste machine fluids including oil are considered “special wastes” under the Waste Management Act. Oil filters must be drained and stored separately. All waste machine fluids must be properly recycled or disposed of by an approved disposal or recycling contractor.
- New and waste machine fluids must be stored in covered, leak-proof containers in a secure area. Check with the Port Coquitlam Fire Department or Ministry of Water, Land and Air Protection for storage requirements.
- Ensure that all employees are aware of their important role in preventing storm drain contamination.

## **Spills**

Spills must be contained and cleaned up immediately to prevent the material from entering the drainage or sanitary sewer systems. Please follow the clean-up procedures as listed in the product's Material Safety Data Sheet.

Some chemicals may be flammable, toxic, corrosive or have other hazardous properties. Call the **Fire Department** immediately at **911** or the Ministry of Water, Land and Air Protection, **Provincial Emergency Program** at **1-800-663-3456**, if in doubt about any spill situation.

## **Enforcement**

Section 11 of the City of Port Coquitlam *Sewer Maintenance Bylaw*, 1971, No. 1091 states that:

11. No gasoline, napha, or other inflammable liquid or explosive substance, and no grease, oil, lye, free acid, mud, grit, plaster of paris, lime, clay or any other trade or industrial waste which may injure, or impair the efficiency or safety of the sanitary sewer system or storm drain system, through deposits forming in same or owing to the attacking and weakening of such sanitary sewer or storm drain, shall be discharged into any sanitary sewer system or storm drain system within the City.

In addition, The City of Port Coquitlam *Waterways Protection Bylaw*, 1969, No. 917 Section 2 states that:

2. Every person is prohibited from polluting any stream, creek, waterway, watercourse, waterworks, ditch, drain, or sewer, whether or not it is located on private property.

**Violators of the provisions of these bylaws shall be guilty of an offence punishable on summary conviction and shall be liable to a fine of at least \$200.00 and up to \$2,000.00 and imprisonment for up to six months. Also, violators will be held responsible for any associated clean up costs.**

Persons responsible for storm drain contamination could also be liable under the following environmental legislation:

- The Federal Fisheries Act
- The Provincial Waste Management Act
- The Provincial Fish Protection Act
