Streamkeepers

Streamkeepers help to protect healthy habitat in their local streams. What makes this stream a good home for these creatures?

1. Cool, clean water
2. Streamside plants and trees to provide food and shade for stream dwellers
3. Pools to provide deep, slow-moving water for resting coho fry
4. Large fallen logs to create pools and trap gravel for spawning
5. Streambeds of clean gravel, cobble and boulders
6. Riffles of shallow water that increase oxygen for salmon eggs, fish and aquatic insects
